

NEC Unified Solutions, IPcelerate Partner to Enhance Capabilities in Business IP Phones

Advances Will Add New Applications that Improve “Off-the-Shelf” Business Telephony Experience for NEC Customers

IRVING, TX, March 18, 2008 — NEC Unified Solutions, Inc., a global leader in enterprise business communications, today announced a partnership with IPcelerate Inc., a provider of advanced VoIP products and technologies. The companies will combine IPcelerate’s Network IP Applications (NIPA) Framework with NEC’s line of IP terminals to deliver new collaboration, productivity and advanced communication capabilities that will enhance the business telephony experience of customers across all market segments.

“NEC is pleased to work with IPcelerate to create new solutions that provide a more visual and interactive off-the-shelf experience for voice in the workplace,” said Jay Krauser, General Manager, Product Management for NEC Unified Solutions. “Using IPcelerate’s comprehensive applications framework, our developers will create advanced applications that are standard offerings on our IP terminals, delivering new levels of business impact for our customers.”

Developers already certified on the award-winning IPcelerate framework will have the opportunity to design new applications for NEC voice platforms without requiring rigorous re-training.

“The possibilities of unified communications and business telephony are vast; however, the end user experience with telephony in the workplace has yet to realize any significant change,” said Kevin Brown, CEO, IPcelerate. “Our partnership with NEC will add data-oriented, visual capabilities to the desktop and launch a new era of end user experience for businesses.”

Developing partnerships that enable companies to quickly bring applications to market is part of NEC’s UNIVERGE@360 approach to unifying business communications. At the core of UNIVERGE360 is the concept of placing people in center of communication. By creating applications for vertical industries and common business roles, individuals now have the ability to take control of communications.

About NEC Unified Solutions, Inc.
